Acknowledgments

The ANZICS Centre for Outcome and Resource Evaluation greatly appreciates the efforts of the intensive care community in Australia and New Zealand. Contributing units for the 2007/08 survey year are listed in the appendix of this report. Without their hard work and contributions this data resource would not be possible.

Thanks are extended to the ANZICS CORE Management Committee and the ANZICS Safety and Quality Committee for their input onto survey design. Acknowledgement is also given to ACCCN and JFICM.

Peter Hicks, who re-designed the current CCR database.

Funding for this research was obtained through grants from the Ministry of Health (NZ) and State and Territory Health Departments.

Introduction

Intensive Care Safety & Quality Survey: Australia and New Zealand 2007/2008 reports findings obtained from the Resource and Activity survey, conducted by the Critical Care Resource (CCR) registry at ANZICS CORE.

Historically, safety and quality data has been presented within the report *Intensive Care Resource & Activity: Australia and New Zealand* reports, which also provides information about the characteristics and activity of Australian and New Zealand intensive care units (ICUs). The Safety and Quality component will now be presented separately. All Intensive Care Resources & Activity Reports can be downloaded from <http://www.anzics.com.au/core/reports>. The compliment to this report is the *Intensive Care Resources & Activity: Australia and New Zealand 2007/2008*.^[1]

The survey tool used to obtain ICU characteristics, activity, and safety and quality activities can be found in the appendix of this report.

189 Australian and New Zealand critical care units in both the public and private sectors were surveyed, of which 181 responded (95.7%). One site was subsequently excluded as it did not fulfil the minimum criteria of invasively ventilating 20 patients per year over 3 years.

Information in this report is intended to be a resource for intensive care staff, public and private health care providers, policy makers and relevant statutory bodies.

To enable effective interpretation of the data, more information is provided in the overview section (Chapter 1).

1 OVERVIEW OF CCR SURVEY

The ANZICS CORE Critical Care Resource (CCR) survey was established in 1993. This is the first specialised safety and quality report. Prior to 2007/08, the safety and quality data was contained within the intensive care reports, of which there are currently 10.[2-11]

The CCR was formerly known as the ANZICS ICU Registry later, the ANZICS Research Centre for Critical Care Resources (ARCCCR), and now its current state, integrated into ANZICS CORE- the Australia New Zealand Intensive Care Society Centre for Outcome and Resource Evaluation.

Dr Peter Hicks in New Zealand is the current CCR director. Previously Associate Professor Graeme Hart has overseen its operation and research activities during his time as the inaugural director.

The Critical Care Resource (CCR) Survey is one of the three affiliated databases/registries administered by the ANZICS Centre for Outcome and Resource Evaluation (CORE). The other two centres are the ANZICS Adult Patient Database (APD) and the Australian and New Zealand Paediatric Intensive Care Registry (ANZPIC). Findings for all 3 registries are presented together in an inaugural Annual Report for 2008.[12]

ANZICS is not-for-profit company located in Melbourne, Australia. The research activities undertaken by the CCR, together with the activities of the APD and ANZPIC are funded bi-nationally by the Ministry of Health (MOH) in New Zealand, and State and Territory Health Departments in a triennial agreement.

The CCR holds a significant collection of data on intensive care resources as a result of its data collection activities. This research is quality-oriented and is directed toward intensive care infrastructure, workforce profiles and processes of care. The annual surveys completed by intensive care unit (ICU) staff assist in monitoring trends in intensive care service delivery.

1.1 Materials and Methods

This section outlines the research project methodology and provides information regarding data items. Not all units respond to each question and hence denominators may not be equivalent in all tables.

Resource and Activity data have been presented separately external of this report.

1.2 Survey Instrument

The 2007/2008 survey instrument was structured on previous surveys conducted by the CCR and can be found in Appendix 8.1. It was designed by Kelly Drennan in conjunction with Dr Peter Hicks and Associate Professor Graeme Hart, and subsequently reviewed by members of the ANZICS CORE Management Committee. External input on the survey design was also received from Dr Tony Burrell and The ANZICS Safety and Quality Committee, as well as the Australian College of Critical Care Nurses (ACCCN).

The 12 page survey instrument was distributed electronically with follow-up conducted by email and telephone. Accompanying the survey was an extract on standards for intensive care by the Joint Faculty of Intensive Care Medicine (JFICM). [13]

The 189 surveys were due for return by the end of December 2008, however the return of surveys was accepted until May 2009. Follow up to non-responders was by letter, telephone, facsimile and e-mail. A large number of survey instruments were redistributed during the follow-up processes. Data was checked, entered and analysed by the principal authors of the report.

1.3 Minimum Criteria

For inclusion in this survey, a critical care unit must possess ventilator capability and have the resources to provide continuous care. ICUs should also invasively ventilate 20 or more patients per annum. A number of smaller ICUs submitted data but some of these have now been excluded. It appears that some of these smaller ICUs function primarily as high dependency units (HDUs) or serve as sites for resuscitation and retrieval of the critically ill. These ICUs will continue to be monitored in forthcoming surveys to capture any changes to their status and to ensure ongoing comprehensive coverage of critical care services across Australia and New Zealand. Continual review of eligible units is undertaken by the CORE and is further discussed in relation to ICU levels.

1.4 Considerations

1.4.1 Confidentiality of Information

The CCR does not release identified unit information without individual unit consent. CCR currently works with other ANZICS entities to ensure contact information for individuals and ICUs is accurate.

1.4.2 Data Quality

The survey was reliant on self-reporting processes which can be viewed as a limitation. Extensive supporting documents were provided to assist contributors with an understanding of key terms and provided the requisite framework.

The number of ICUs reporting information to variables in the report is provided in each table. Data quality was inconsistent, with several surveys incomplete on return. Extensive follow up occurred to obtain missing data and to clarify any data errors. However there were many reasons why data was unable to be provided or retrieved at a given point in time. The CCR endeavours to follow definitions (where applicable) listed in the National Health Data Dictionary.[14]

1.4.3 Data Analyses

Given the scope of the survey and the type of data collected a descriptive analytical approach was viewed as the most suitable method. Data was entered into custom designed Microsoft Office Access database.[15] Data extraction and analyses were undertaken with Microsoft Excel 2003 [16] and Access.

1.5 Critical Care Units- Inclusions

A critical care complex may include general and specialty ICUs such as neurosurgical or Cardio Thoracic, combined intensive care/coronary care/high dependency units (ICU/CCU/HDUs), paediatric intensive care units (PICUs), high dependency unit(s) (HDUs) managed by an ICU, or a combination of these. HDUs under non-ICU management are excluded from the survey.

Detailed data on paediatric services and activity can be found in the Australian and New Zealand Paediatric Intensive Care Registry (ANZPIC) reports.[17-18]

2 Participating ICUs

The survey for the 2007/08 financial year had a participation rate of 95.8% which comprised 154 Australian ICUs and 27 New Zealand ICUs; a total of 181 out of 188 units. One Australian site (QLD; private) was subsequently excluded as it was ineligible based on the minimum criteria of ventilating 20 patients per annum over 3 consecutive years. The participation rate of contributing units is displayed by Region and Sector in Table 1. A list of contributing ICUs is presented in Appendix 8.2.

Table 1: 2007/08 CCR survey response rates

| Sector | Region | Surveys Sent | Responses received | Participation rate |
|---------------|--------|--------------|--------------------|--------------------|
| Public | ACT | 2 | 2 | 100.0% |
| | NSW | 39 | 38 | 97.4% |
| | NT | 2 | 2 | 100.0% |
| | NZ | 25 | 24 | 96.0% |
| | QLD | 23 | 23 | 96.0% |
| | SA | 7 | 7 | 100.0% |
| | TAS | 3 | 3 | 100.0% |
| | VIC | 24 | 23 | 95.8% |
| | WA | 5 | 5 | 100.0% |
| Public Total | | 130 | 127 | 97.7% |
| Private | ACT | 1 | 1 | 100.0% |
| | NSW | 16 | 16 | 100.0% |
| | NT | | Nil private ICU | |
| | NZ | 3 | 3 | 100.0% |
| | QLD | 16 | 15 | 100.0% |
| | SA | 6 | 5 | 83.3% |
| | TAS | 1 | 1 | 100.0% |
| | VIC | 12 | 9 | 75.0% |
| | WA | 4 | 4 | 100.0% |
| Private Total | | 59 | 54 | 91.5% |
| Australia | | 189 | 181 | 95.8% |

There were 46 Rural ICUs submitting data, 36 each of Tertiary and Metropolitan units, 9 paediatric and 53 private ICUs.

This chapter includes the data from 9 PICUs, of which 8 are located in Australia and one in New Zealand.

3 Summary Resource & Activity data for 2007/08

A brief overview of summary activity data collected in the resources and activity survey is presented in Table 2.

There were 2,108 physical beds in Australia and New Zealand respectively, of which 1,821 were available for use in the 180 contributing ICUs. 178 ICUs reported 127,074 admissions. At a unit level, there was a median (IQR) of 722 (441 to 3345) patients in the 2007/08 financial year.

Table 2: Summary Resource and Activity Data

| | Australia | New Zealand | Total |
|---------------------------------------|----------------|-------------|-----------------|
| Number of contributing units | 153 | 27 | 180 |
| Population* | 22,010,040 | 4,333,075 | 26,343,115 |
| Available beds per 100,000 population | 7.4 | 4.6 | 6.9 |
| Physical beds (a) | 1,856 | 252 | 2,108 |
| Available beds (b) | 1,622 | 199 | 1,821 |
| Ventilator Beds (c) | 1,313 | 174 | 1,487 |
| Total Admission | 127074 (n=151) | 18,919 | 145,993 (n=178) |
| Readmission | 5,457 (n=133) | 540 (n=21) | 5997 (n=154) |
| Readmission rate (mean) | 4.7% | 3.5% | 4.5% |

Notes:

- (a) *PHYSICAL BEDS* refers to a single patient care location fully configured to ICU standards. It is an actual bed (or bed equivalent), not a bed space.
 - (b) *AVAILABLE BED* is a bed in use or immediately available, which has advanced life support capability and is fully staffed and funded. The number of available beds cannot exceed physical beds.
 - (c) *VENTILATOR BED* refers to a physical ICU bed plus a ventilator.
- (n=)Number of contributing hospitals

Population data source:

Australia Bureau of Statistics 'Population Clock' <http://www.abs.gov.au>; accessed 16/10/09

Statistics New Zealand 'Estimated Resident Population Of New Zealand' <http://www.stats.govt.nz>, accessed 16/10/09

40.7% of patients had invasive ventilation requirements, while 7.7% of patients received non-invasive ventilation only. Unit occupancy based on available beds was a mean 68% and median 70.2% of capacity level (in 166 contributing ICUs). Occupancy was calculated by dividing available beds by the yearly bed hours provided and 365 (days in a year) to create a percentage of occupied days from total possible bed days. Overall patient length of stay (LoS) was 3.34 days in Australia and 2.36 days in New Zealand.

In Australia and New Zealand, there was 1.2 and 1.7 specialist FTE per 1,000 patient days.

Intensivist comprised 82.5% of the total FTE worked in intensive care units. There was 16.1 and 20.7 RN FTE in Australia and New Zealand respectively.

4 Safety & Quality

The CCR resource and activity survey contains safety and quality questions, the results of which are presented in this chapter. Each year these safety and quality questions are revised and approved by the committee. New Zealand will be discussed as a jurisdiction component alongside the Australian States in this chapter. Data is only presented where a unit was able to provide information.

4.1 Clinical Indicators

4.1.1 ACHS data collection and submission

Table 3 details the percentage of Australian units which collected and submitted clinical indicators to the Australian Council on Healthcare Standards (ACHS). This indicator does not apply to New Zealand. 70.9% (73/103) of public ICUs and 82.0% (41/50) of private ICUs submitted, providing an overall total of 74.5% for Australian ICUs.

Table 3: ACHS Clinical indicator data submission 2007/08

| Sector | Region | Total no. Units | No. ICUs contributing to ACHS | Percent collecting and submitting ACHS data |
|--------------|---------------|-----------------|-------------------------------|---|
| Public | ACT | 2 | 2 | 100.0% |
| | NSW | 38 | 27 | 71.1% |
| | NT | 2 | 2 | 100.0% |
| | QLD | 23 | 15 | 65.2% |
| | SA | 7 | 5 | 71.4% |
| | TAS | 3 | 2 | 66.7% |
| | VIC | 23 | 18 | 78.3% |
| | WA | 5 | 2 | 40.0% |
| Public Total | | 103 | 73 | 70.9% |
| Private | ACT | 1 | 1 | 100.0% |
| | NSW | 16 | 14 | 87.5% |
| | QLD | 14 | 12 | 85.7% |
| | SA | 5 | 3 | 60.0% |
| | TAS | 1 | 1 | 100.0% |
| | VIC | 9 | 7 | 77.8% |
| | WA | 4 | 3 | 75.0% |
| | Private Total | | 50 | 41 |
| Australia | | 153 | 114 | 74.5% |

4.1.2 Additional Clinical Indicators

Units were asked to identify clinical indicator which were collected in 2007/2008 including:

- Central Line Associated Bacteraemia (CLAB) rate
- Ventilator-associated pneumonia rate (VAP)
- Deep vein thrombosis (DVT) prophylaxis
- Methicillin Resistant Staphylococcus Aureus (MRSA) rate
- Pressure areas
- Medication errors
- Complications/Adverse events
- Medical Emergency Teams (MET)
- Nutrition indicators
- Australian Incident Monitoring System (AIMS)

Medication errors, pressure areas and CLAB were collected with the greatest frequency. Figure 1 identifies the aggregate percentage of units which report submitting the indicator, while Table 4 presents this distribution numerically by region and sector.

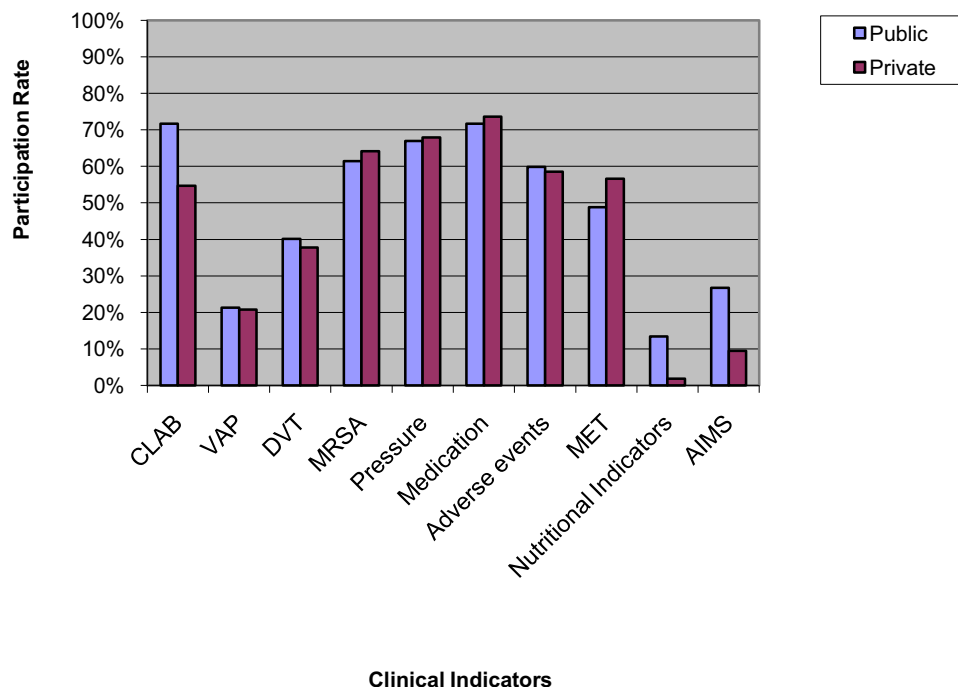

Figure 1: Clinical Indicators Collection Rates – Australia and New Zealand

Table 4: Number of ICUs collecting clinical indicators

| Sector | Region | No. ICUs | The number of ICUs collecting the following clinical indicators: | | | | | | | | | | | | | |
|---------------|--------------|----------|--|-----|-----|------|---------------|------------------|----------------|-----|-----------|------|-------|----|--|---|
| | | | CLAB | VAP | DVT | MRSA | Pressure Area | Medication Error | Adverse Events | MET | Nutrition | AIMS | Other | | | |
| Public | ACT | 2 | 1 | | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | | | | 1 |

| | TAS | 1 | | | | | 1 | 1 | | | | | | | | |
| | VIC | 9 | 5 | 1 | 4 | 3 | 6 | 6 | 5 | 5 | | | 1 | | | |
| | WA | 4 | | | | 1 | 1 | 1 | 1 | 3 | | | 2 | | | |
| Private Total | | 53 | 11 | 20 | 34 | 36 | 39 | 31 | 30 | 1 | 5 | 8 | | | | |
| AU & NZ Total | | 180 | 120 | 38 | 71 | 112 | 121 | 130 | 107 | 92 | 18 | 39 | 22 | | | |

22 units reported collecting “other” clinical indicators. These included

- Code Blues
- procedural complications
- admission delay
- unplanned extubation
- surgical wound infection surveillance
- unplanned transfers from ward

4.2 ACLS & ADAPT

Data was collected regarding the percentage of staff currently certified in Advanced Cardiac Life Support (ACLS) and Australasian Donor Awareness Program (ADAPT). ADAPT is a one day course relating to brain death and organ and tissue donation, and for medical staff the ACLS recertification can be a hospital or externally provided formal review of practical competence and theory.

There was a significant spread of reporting, and the percentage of staff reported to be currently certified in these two schemes is presented below in Table 5

Table 5: The percentage of staff certified in ACLS & ADAPT

| | ACLS | | ADAPT | |
|----------|---------------------------|---------------------------|---------------------------|---------------------------|
| | % Medical Staff certified | % Nursing Staff certified | % Medical Staff certified | % Nursing Staff certified |
| No. ICUs | 131 | 160 | 126 | 129 |
| Min | 0 | 0 | 0 | 0 |
| Max | 100.0 | 100.0 | 100.0 | 100.0 |
| Mean | 64.7 | 69.7 | 35.7 | 11.5 |
| Median | 95.0 | 80.0 | 25.0 | 0.0 |

4.3 Echocardiography

Echocardiography refers to a group of interrelated ultrasound applications used to diagnose and manage conditions of the heart and great vessels.

74 out of 153 (48%) of Australian ICUs, and 13 out of 27 (50%) of New Zealand ICUs reported their intensive care specialists perform Echocardiography on intensive care patients. This represents 49.6% and 45.3% of public and private in Australia and New Zealand units respectively.

Echocardiography by region can be seen in Table 6.

Table 6: Performance of Echocardiography – Australia and New Zealand

| Sector | Region | Total No. ICUs | No. ICUs performing Echocardiography | % of total units performing Echocardiography |
|---------------|--------|----------------|--------------------------------------|--|
| Public | ACT | 2 | 1 | 50.0% |
| | NSW | 38 | 19 | 50.0% |
| | NT | 2 | 0 | 0.0% |
| | NZ | 24 | 12 | 50.0% |
| | QLD | 23 | 10 | 43.5% |
| | SA | 7 | 1 | 14.3% |
| | TAS | 3 | 3 | 100.0% |
| | VIC | 23 | 14 | 60.9% |
| | WA | 5 | 3 | 60.0% |
| Public Total | | 127 | 63 | 49.6% |
| Private | ACT | 1 | 1 | 100.0% |
| | NSW | 16 | 10 | 62.5% |
| | NZ | 3 | 1 | 33.3% |
| | QLD | 14 | 5 | 35.7% |
| | SA | 5 | 1 | 20.0% |
| | TAS | 1 | 1 | 100.0% |
| | VIC | 9 | 2 | 22.2% |
| | WA | 4 | 3 | 75.0% |
| Private Total | | 53 | 24 | 45.3% |
| AU & NZ Total | | 180 | 87 | 48.3% |

77 ICUs possessed an Echocardiography machine within their ICU, comprising 65 units (42.4%) in Australian and 12 (44.4%) in New Zealand. Figure 2 is a flow diagram of Echocardiography as there is variance in practice regarding infrastructure and operation.

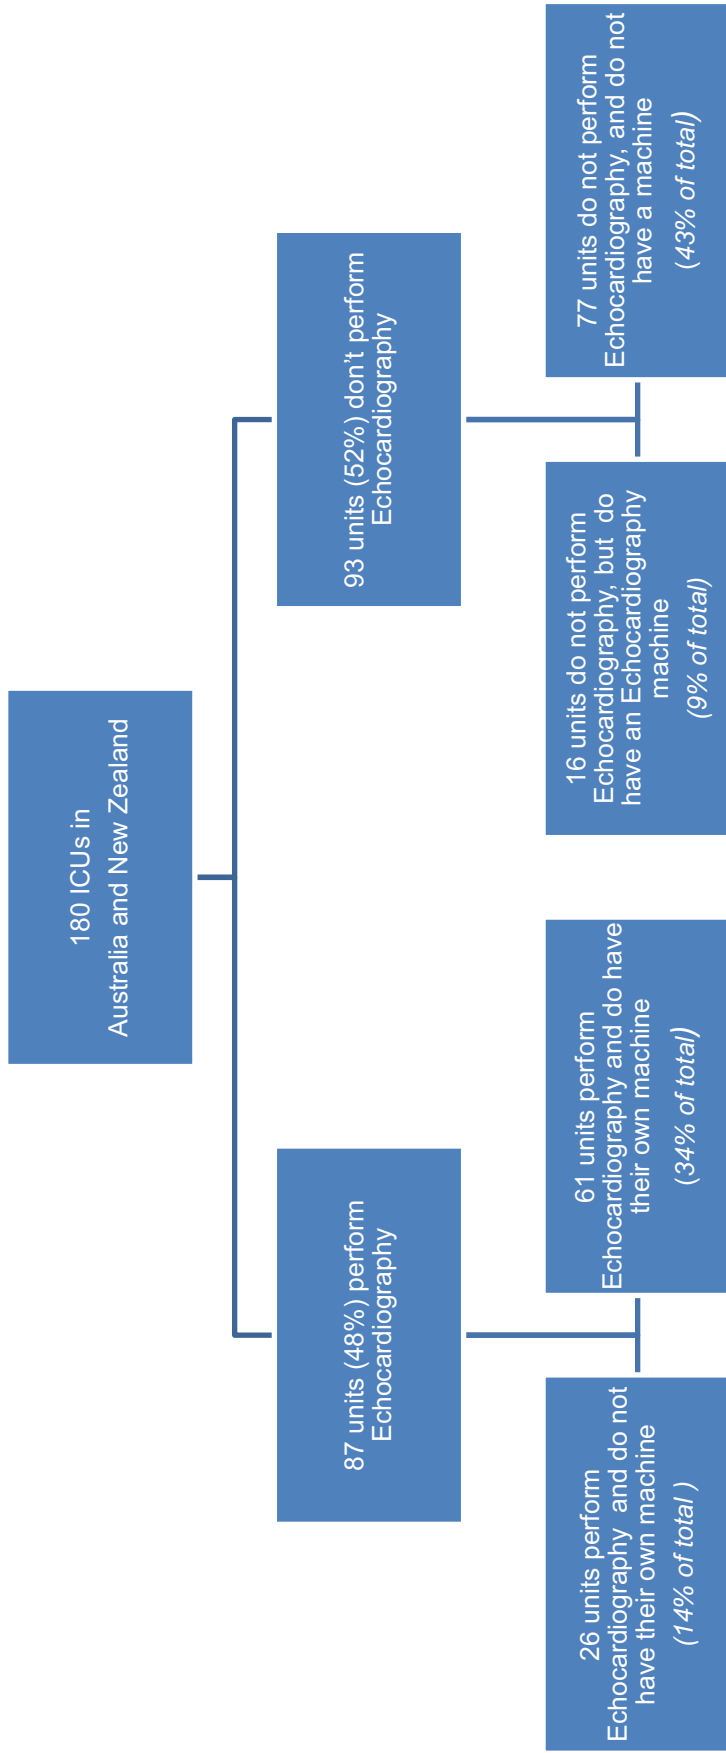

Figure 2: Echocardiography practice and resource

4.4 Quality Activities

A quality activity is one which ensures the ICU is achieving optimal outcome and has a focus on the process of care. Examples include outcomes data (i.e. via ANZICS APD reports), conducting Mortality and Morbidity meetings, monitoring and reviewing incidents and conducting audits on various processes of care in the ICU. Staff members self reported the full time equivalent (FTE) for the coordination of ICU quality activities.

It has been noted that there is some interpretation difficulties with this question, and this has been further refined for future surveys. However, the data received from this reported 66% of all time spent on the coordination of ICU quality activities was done so by nurses (see Table 7).

Table 7: Allocated Staff Members for Co-ordination of ICU Quality Activities – AU & NZ

| Sector | Region | MEDICAL | | | | NURSE | | | | OTHER | | | | TOTAL | |
|---------------|--------------|---------|-----------|------|------------------|---------|-----------|------|------------------|---------|-----------|------|------------------|-------|-------|
| | | No. ICU | No. Staff | FTE | % of State total | No. ICU | No. Staff | FTE | % of State total | No. ICU | No. Staff | FTE | % of State total | | |
| Public | ACT | 1 | 1 | 0.2 | 50.0% | 1 | 1 | 0.2 | 50.0% | | | | | | 0.4 |

4.5 Staffing Performance Review

All sites in Australia and New Zealand were assessed for the regular performance review of staff members. 98.3% (n=177) of all sites had at least one regular performance review of medical and/or nursing staff. Table 8 identifies the distribution of performance review by position and region.

Table 8: Regular Performance Review of Staff

| Sector | Region | No. ICUs | No. with medical AND/ OR nursing review | | Medical review – no. ICUs | | Nursing review – no. ICUs | | 'Other' review- no. ICUs |
|---------------|--------|----------|---|-----------------|---------------------------|---------|---------------------------|---------|--------------------------|

| AU & NZ Total | | 180 | 177 | 98.3% | 96 | 124 | 166 | 171 | 64 |

Table 9 provides the per cent of performance review for each subsection of the Senior Medical, Medical, Senior Nurse, Nurse, and Other groups.

Table 9: Performance Review (Per cent)

| Sector | No. ICUs | Senior Medical | Medical | Senior Nurse | Nurse` | Other |
|---------------|----------|----------------|---------|--------------|--------|-------|
| Public Total | 127 | 60.6% | 76.4% | 90.6% | 93.7% | 34.6% |
| Private Total | 53 | 35.8% | 50.9% | 96.2% | 98.1% | 37.7% |
| AU & NZ Total | 180 | 53.3% | 68.9% | 92.2% | 95.0% | 35.6% |

4.6 Competency Standards

Competency standards regarding Airway Management and Central Line Insertion were assessed (see Table 10). Overall, 60% of ICUs participated in Airway Management and 61.7% of in Central Line Insertion Management.

17 ICUs (9.4%) reported participating in 'Other' competency standard programs. These other programs included

- Tracheostomy
- Epidural
- IV injection via slow injection assessment
- No lift
- Transport
- Cardioversion

Table 10: Airway and central line competency standards

4.7 FAST-HUG

FAST-HUG is a mnemonic developed as a simple reminder to improve application of evidence-based preventive measures in the ICU. F = Feeding, A = Analgesia, S = Sedation, T = Thrombolytic prophylaxis, H = Head of bed elevation, U = Ulcer prophylaxis (stress and otherwise), and G = Glucose control.

Only 36.1% of ICUs in Australia and New Zealand used a process orientated checklist of FAST-HUG or a variation of this system. This is displayed by region in Table 11.

Table 11: Participation in FAST-HUG (or variation)

| Sector | Region | No. ICUs | No | Yes | % |
|---------------|--------|----------|-----|-----|--------|
| Public | ACT | 2 | | 2 | 100.0% |
| | NSW | 38 | 25 | 13 | 34.2% |
| | NT | 2 | 1 | 1 | 50.0% |
| | NZ | 24 | 16 | 8 | 33.3% |
| | QLD | 23 | 12 | 11 | 47.8% |
| | SA | 7 | 6 | 1 | 14.3% |
| | TAS | 3 | 3 | | 0.0% |
| | VIC | 23 | 11 | 12 | 52.2% |

| AU & NZ Total | | 180 | 115 | 65 | 36.1% |

4.8 Rounds with Infectious Disease Specialists

Units were questioned regarding the presence of an infectious disease specialist and/or microbiologist. 45.6% (n = 82) of units in Australia and New Zealand conducted rounds within their unit, and of these 84.1% (n = 69) had a frequency of at least weekly. These are displayed in Table 12 below.

Table 12: Rounds with Infectious disease specialists and/ or microbiologist

| Sector | Region | No. ICUs | Conducted Rounds | % Total ICUs that conducted rounds | Rounds were at least weekly | % of ICUs which conducted rounds that were at least weekly |
|---------------|-------------|----------|------------------|------------------------------------|-----------------------------|--|
| Public | Australia | 103 | 59 | 57.3% | 53 | 89.8% |
| | New Zealand | 24 | 10 | 41.7% | 9 | 90.0% |
| Public Total | | 127 | 69 | 54.3% | 62 | 89.9% |
| Private | Australia | 50 | 13 | 26.0% | 7 | 53.8% |

| Private Total | | 53 | 13 | 24.5% | 7 | 53.8% |
| AU & NZ Total | | 180 | 82 | 45.6% | 69 | 84.1% |

4.9 Antibiotic Stewardship Program

An Antibiotic Stewardship Program seeks to optimize antimicrobial prescribing in order to improve individual patient care as well as slow the spread of antimicrobial resistance. 35% of all ICUs had a program in 2007/08, and these are identified by region in Table 13.

Table 13: Antibiotic Stewardship Program

| Sector | Region | No. ICUs | Yes | % with program |
|---------------|--------|----------|-----|----------------|
| Public | ACT | 2 | 1 | 50.0% |
| | NSW | 38 | 15 | 39.5% |

4.10 ICU Antibigrams

An antibiogram is the result of a laboratory testing for the sensitivity of an isolated bacterial strain to different antibiotics.

The number of units regularly obtaining antibigrams specific to the ICU (rather than hospital -wide antibigrams) was assessed. 21% of public units (n = 22), and 26% of private units (n = 11) reported routinely gathering antibigrams (see Table 14)

Table 14: ICU specific antibigrams – Australia and New Zealand

| Sector | Region | No. ICU | Yes | % with Antibigrams |
|---------------|--------|---------|-----|--------------------|
| Public | ACT | 2 | | 0.0% |
| | NSW | 38 | 4 | 11.8% |
| | NT | 2 | | 0.0% |
| | NZ | 24 | 5 | 26.3% |
| | QLD | 23 | 6 | 35.3% |

| AU & NZ Total | | 180 | 33 | 22.4% |

4.11 Critical Incident Monitoring Program

Critical incident reporting is a quality assurance programme to monitor incidents and accidents in the ICU, caused by human error, problems inherent in a complex system, or a combination of these factors.

Units were examined for their presence of a critical incident monitoring program. It was found that 86.1% of units in Australia and New Zealand had an incidence program (see Table 15).

Table 15: Critical incident program

| Sector | Region | No. ICUs | Yes | No | % with program |
|---------------|--------|----------|-----|----|----------------|
| Public | ACT | 2 | 1 | 1 | 50.0% |
| | NSW | 38 | 36 | 2 | 94.7% |
| | NT | 2 | 2 | | 100.0% |
| | NZ | 24 | 18 | 6 | 75.0% |
| | QLD | 23 | 21 | 2 | 91.3% |
| | SA | 7 | 5 | 2 | 71.4% |
| | TAS | 3 | 2 | 1 | 66.7% |
| | VIC | 23 | 19 | 4 | 82.6% |
| | WA | 5 | 4 | 1 | 80.0% |
| Public Total | | 127 | 108 | 19 | 85.0% |
| Private | ACT | 1 | 1 | | 100.0% |
| | NSW | 16 | 15 | 1 | 93.8% |
| | NZ | 3 | 3 | | 100.0% |
| | QLD | 14 | 11 | 3 | 78.6% |
| | SA | 5 | 5 | | 100.0% |
| | TAS | 1 | 1 | | 100.0% |

| AU & NZ Total | | 180 | 155 | 25 | 86.1% |

4.12 Issues in the ICU

Units were asked to rank the main system issues within their ICU on a scale with 9 issues for discussion.

The issue identified as “most important” by the ranking given by units was analyzed individually. 51% of ICUs (n=92) identified lack of staff as the main issue. The remaining ‘most important’ issue identified by 49% of other ICUs is presented in Table 16 in descending order of occurrence. Several ICUs reported more than one issue as the “most important”. Some ICUs did not rank all 9 variables.

Table 16: The most important system issue

| Issue | Identified as "most important issue" | |
|---|--------------------------------------|-----------------|
| | Total No. ICUs | % of total ICUs |
| Lack of Staff | 92 | 51% |
| Exit block | 35 | 19% |
| Lack of Beds | 16 | 9% |
| Inability to admit patients | 14 | 8% |
| Inadequate funding for Education | 14 | 8% |
| Inadequate Funding for quality activities | 6 | 3% |
| Implementation of MET | 3 | 2% |
| Drug errors | 2 | 1% |
| Ineffective incident monitoring | 0 | 0% |

Notes: only lists the 'most important' issue and does not rank various factors.

The **top 3** system most important issues affecting site, in decreasing order are:

- | | | |
|-------------------------|----|---|
| (Most important issue) | 9. | Lack of staff |
| | 8. | Inability to admit patients |
| | 7. | Exit block |
| | 6. | Lack of Beds |
| | 5. | Implementation of MET |
| | 4. | Inadequate funding for Education |
| | 3. | Inadequate Funding for quality activities |
| | 2. | Ineffective incident monitoring |
| (Least important issue) | 1. | Drug errors |

Sites were asked to rank issues on a scale between 1 and 9, with the higher value representing a greater effect of the issue. The mean of these variables are presented below by region (Table 17) and by ICU classification (Table 18).

Zero ICUs noted ineffective incident monitoring as the most important issue.

Table 17: System Issues – Mean score by Region

| Region | No. ICUs | Lack of Staff | Inability to admit patients | Exit block | Lack of Beds | Implementation of MET | Inadequate funding for Education | Inadequate Funding for quality activities | Ineffective incident monitoring | Drug errors |
|---------------|----------|---------------|-----------------------------|------------|--------------|-----------------------|----------------------------------|---|---------------------------------|-------------|
| ACT | 3 | 9.0 | 5.7 | 5.3 | 5.7 | 3.0 | 3.3 | 4.3 | 3.0 | 5.0 |
| NSW | 54 | 7.0 | 5.3 | 6.4 | 5.8 | 3.5 | 5.0 | 5.2 | 3.3 | 3.9 |
| NT | 2 | 8.0 | 3.0 | 8.0 | 4.0 | 2.5 | 6.5 | 5.5 | 3.5 | 8.0 |
| NZ | 27 | 7.3 | 5.7 | 6.9 | 5.3 | 2.6 | 5.3 | 4.9 | 3.7 | 4.1 |
| QLD | 37 | 8.0 | 5.1 | 6.2 | 4.8 | 3.0 | 6.0 | 5.3 | 3.7 | 3.6 |
| SA | 12 | 7.4 | 4.7 | 6.8 | 6.2 | 3.1 | 5.6 | 5.8 | 3.0 | 4.3 |
| TAS | 4 | 8.0 | 8.3 | 5.0 | 5.8 | 4.5 | 6.3 | 4.8 | 3.5 | 2.5 |
| VIC | 32 | 7.5 | 6.1 | 6.9 | 5.8 | 2.7 | 5.0 | 5.1 | 3.0 | 2.8 |
| WA | 9 | 6.6 | 7.3 | 6.1 | 5.9 | 2.7 | 5.7 | 5.0 | 3.4 | 3.0 |
| AU & NZ Total | 180 | 7.4 | 5.6 | 6.5 | 5.5 | 3.1 | 5.3 | 5.2 | 3.4 | 3.7 |

Note

- The mean of the score is presented above. The higher the score, the more important the issue. (Scale- 1 = least important, 9 = most important)
- Includes public and private

Table 18: System Issue – Mean score by ICU Classification

| ICU Classification | Tertiary | Metro | PICU | Rural / Regional | Private | AU & NZ total |
|---|----------|-------|------|------------------|---------|---------------|
| No. ICUs | 36 | 35 | 9 | 45 | 55 | 180 |
| Lack of Staff | 7.0 | 7.0 | 8.2 | 7.8 | 7.5 | 7.4 |
| Inability to admit patients | 7.0 | 6.0 | 6.8 | 5.4 | 4.3 | 5.6 |
| Exit block | 7.0 | 6.9 | 6.9 | 6.9 | 5.5 | 6.5 |
| Lack of Beds | 5.8 | 5.9 | 5.2 | 5.2 | 5.4 | 5.5 |
| Implementation of MET | 2.7 | 2.7 | 1.8 | 3.4 | 3.5 | 3.1 |
| Inadequate funding for Education | 5.6 | 4.8 | 5.4 | 5.4 | 5.5 | 5.3 |
| Inadequate Funding for quality activities | 4.4 | 4.7 | 5.3 | 5.4 | 5.7 | 5.2 |
| Ineffective incident monitoring | 3.4 | 2.8 | 2.6 | 3.3 | 4.0 | 3.4 |
| Drug errors | 3.4 | 4.0 | 3.4 | 3.0 | 4.3 | 3.7 |

Note

- The mean of the score is presented above. The higher the score, the more important the issue. (Scale- 1 = least important, 9 = most important)

4.13 CVCs

Central Venous Canulation (CVCs) is indicated for monitoring central venous pressure (CVP) and administering certain drugs and parenteral nutrition.

4.13.1 Guidance Isolation for CVCs

Units were assessed regarding their policy of mandatory ultrasound guidance for localisation for CVCs. 15.7% of public ICUs and 9.4% of private ICUs in Australian and New Zealand possessed a mandatory policy within their unit, giving a total of 12.2%. Regional descriptions can be found below in Table 19.

Table 19: Policy of mandatory ultrasound guidance for localisation of CVCs

4.13.2 Routine Replacement of CVCs

Table 20 shows the number of units which routinely replace central venous catheters (CVCs) after a specific length of time in situ by region and sector. Only 36% of ICUs routinely replace CVCs.

Table 20: Routine Replacement of CVCs

| Sector | Region | No. ICUs | No. Sites Routinely replacing CVCs | % Sites Routinely replacing CVCs |
|---------------|--------|----------|------------------------------------|----------------------------------|
| Public | ACT | 2 | 0 | 0.0% |
| | NSW | 38 | 11 | 28.9% |

4.13.3 CVC Type

The type of CVC inserted in the unit was examined to determine the usage differences between plain, chlorhexidine coated or impregnated, antibiotic coated or impregnated, and other antimicrobial.

98.3% of sites (n=177) were able to provide information relating to the proportion of CVCs. 79.7% of CVCs inserted were either a plain or Chlorhexidine coated/ impregnated CVC. 16.2% of CVCs used were antibiotic coated/impregnated, with only 4.2% using a different antimicrobial CVC to plain, chlorhexidine or antibiotic. This information is presented Table 21 and Figure 3.

Table 21: CVC usage type – by sector and region

| Sector | Region | No. ICUs | Plain CVC | Chlorhexidine coated/ impregnated CVC | Antibiotic coated/ impregnated CVC | Other antimicrobial CVC |

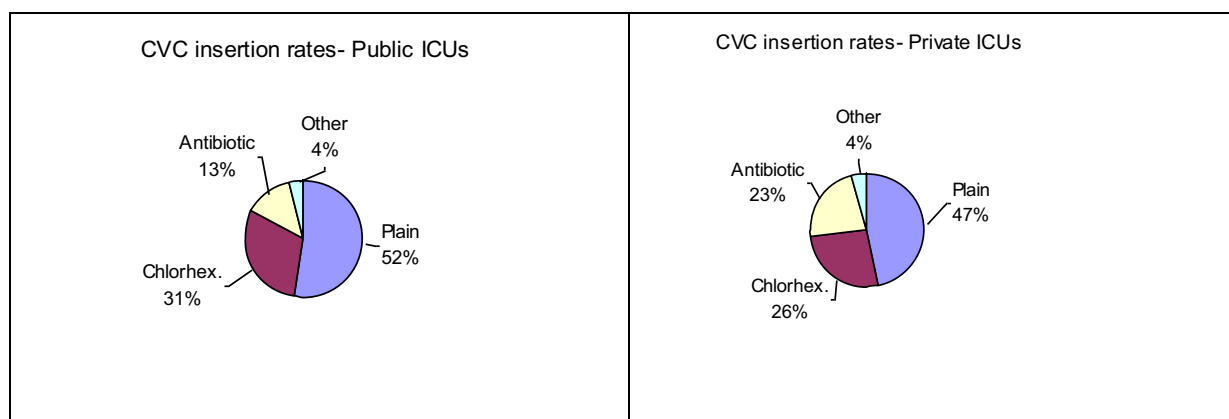

Figure 3: CVC insertion rates by type and sector

4.13.4 Arterial Line and Sepsis

Table 22 examines whether the ICU has a policy to manage the arterial line as they would the CVC in suspected intravascular device related sepsis. 78% of public sites and 90.6% of private followed the same strategies as they would for CVC management. There is wide variation between region and sector.

Table 22: Management of Arterial Line in Sepsis

| Sector | Region | Total No ICUS | No. ICUs managing arterial line manages as suspected intravascular device related sepsis | % of ICUs managing arterial line manages as suspected intravascular device related sepsis |
|---------------|--------|---------------|--|---|

4.14 Central Line Time limits

Table 23 details the 172 out of 180 ICUs (95%) who imposed maximum time limits on the use of intravenous administration sets (tubing) attached to central lines by region. The majority of units imposing time lines (60%) replaced CVCs on day 3-4. Figure 4 presents the number of units imposing time limits

Table 23: Time management of intravenous administration sets attached to central lines by Region

| Sector | Region | Total No. ICUs | no time limits | 1-2 days | 3-4 days | 5-6 days | 7 days |

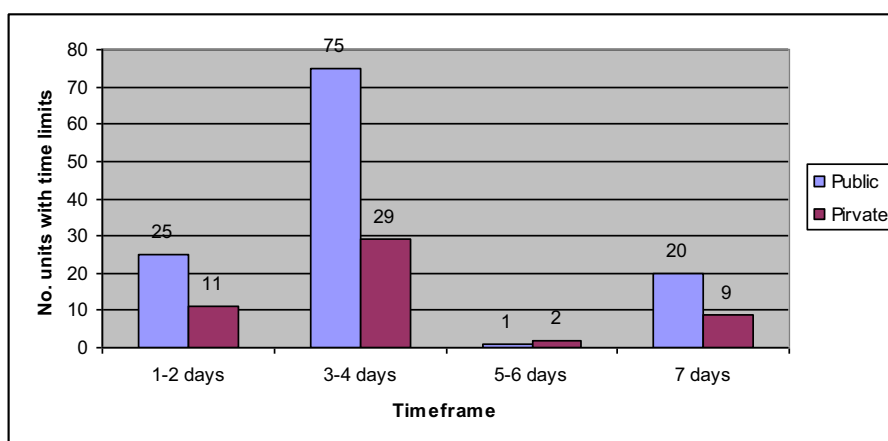

Figure 4: Time management of intravenous administration sets attached to central lines

4.15 Routine culture of Catheters and CVCs

Sites were questioned regarding their practice of routinely culturing tips of intravascular devices (in situ >24 hours) for both peripheral arterial catheters and central venous catheters. Overall 28.9% of units routinely cultured CVCs, and 11.7% routinely cultured arterial line management. This is shown by region and sector in Table 24.

Table 24: Routine culture of Peripheral arterial catheters and CVCs

| Sector | Region | Total No. ICUs | Routine Culturing of CVC | | Routine Culturing of Arterial Line Management | |

4.16 Data entry and collectors in ICUs for APD / ANZPIC

4.16.1 Data collectors and data entry personnel

The presence of data collectors and data entry personnel APD / ANZPIC was also examined in the survey. 69 units reported the presence of 132 data collectors, with a corresponding 48.7 FTE (see Table 25).

96 units had staff allocated to data entry, of which 134 people performed a total of 57 FTE. These are displayed by region in Table 26.

Table 25: Number and FTE of data collectors by Region

| Region | Total No. ICUs | Data Collector(s) for APD / ANZPIC | | | |
|-----------------|----------------|------------------------------------|-----------------------------|-----|------|
| | | No. ICUs | % ICUs with Data Collectors | No. | FTE |

| Total AU and NZ | 180 | 96 | 53.3% | 134 | 57.1 |

4.16.2 Staff Background

The differing backgrounds for staff performing data collection and entry are detailed by proportion in Table 27 and Table 28. Nurses comprised the major demographic section with 42.5% collecting. Administrative staff comprised 61.2% of the staff entering data. There is significant variation across region and ICU type.

Table 27: Background of Data Collectors

| Region | Senior Medical Officer | Registrar | Resident | Nurse | Administrative | Other |

8.1 2007/08 CCR SURVEY

ANZICS Centre for Outcome and Resource Evaluation

Review of ICU Resources and Activity 2007 – 2008 Financial Year (1/7/2007 – 30/6/2008)

Please complete all details and submit by 19th December 2008.

Hospital Name: _____
 ICU Director: _____
 ICU Director email address: _____
 ICU Nurse Manager: _____
 ICU Nurse Manager email address: _____
 ICU Telephone number: _____
 ICU Fax number: _____

- Please ensure you keep a copy of this survey until you obtain acknowledgement of its receipt.
- Tick one box only, unless otherwise specified. Please write clearly
- Please use a ZERO only where the total for the question has a zero value. For items where data is not collected, please write u/a (unavailable)
- Please refer to the glossary for a description of all terms used

CCR Survey 2007/08

1

HOSPITAL & ICU DESCRIPTORS

1. Hospital type:
 Public Hospital
 Private Hospital
 Public Hospital under Private Management Contract
 If under private management, please specify contracted company: _____

2. Number of hospital beds
 average available beds

| |
|--|
| |
|--|

3. Number of hospital separations
 refer to glossary

| |
|--|
| |
|--|

4. ICU type:
 General ICU (integrated medical / surgical including ICU managed HDU)
 ICU/CCU/ HDU (integrated intensive care / coronary care / high dependency)
 Paediatric ICU
 Other ICU (specify type) _____
 High Dependency Unit / Step Down / Special Care Unit
5. Functional ICU level: (refer to attached JFICM guidelines)
 Level 3
 Level 2
 Level 1 (short term ventilation only)

ICU BED & ADMISSION DATA

6. Number of critical care beds:
 List *usage* number of beds in each category; please refer to glossary for advice on completing this section.

| | General ICU | Other ICU * | HDU** | CCU *** | Total No. Beds |
|-----------------|-------------|-------------|-------|---------|----------------|
| Physical Beds | | | | | |
| Available Beds | | | | | |
| Ventilator Beds | | | | | |

* E.g. dedicated cardiac surgery/ neurosurgical / ICU
 ** HDU Beds managed by ICU
 *** Collocated in ICU/CCU complex

CCR Survey 2007/08

2

7. Critical care admission data:

(AORTIC users refer to enclosed documentation)

- Admissions: all admissions including readmissions.
- Readmissions: all readmissions including multiple readmissions for the same hospital episode of care.
- Do not count patients twice if they are transferred between ICU/HDU for the same ICU/HDU admission.
- If unable to allocate admission numbers to specific locations, allocate them to the total column.

| | Emergency | Other ICU * | HDU ** | CCU *** | Total |
|--------------|-----------|-------------|--------|---------|-------|
| Admissions | | | | | |
| Readmissions | | | | | |
| Deaths | | | | | |

* E.g. dedicated cardiac surgery/neurosurgical ICU

** HDU Beds managed by ICU

*** Collocated in ICU/CCU complex

8. Paediatric Admissions:

| | |
|---|--|
| Number of patients ≤ 16 years of age: (included in total of all admissions) | |
| Number of invasively ventilated patients ≤ 16 years: (included in total of all invasively ventilated patients) | |
| Number of patients ≤ 16 years transferred from your ICU to a paediatric ICU: | |
| Number of deaths ≤ 16 years of age: (included in the total for all deaths) | |

VENTILATION DATA

9. Ventilation data: All admissions.

Please note that a, b and c in the table below are mutually exclusive. Do not include patients that receive both invasive and non-invasive ventilation in the totals for a or b. If there is uncertainty for any of the categories, please only place numbers in the category that is most accurate.

| | No. |
|--|-----|
| a. Number of patients receiving invasive ventilation only | |
| b. Number of patients receiving non-invasive ventilation only | |
| c. Number of patients receiving both invasive and non-invasive ventilation | |
| Total number of ventilated patients (a+b+c): | |

10. Ventilator hours:

Please give HOURS of care. If data is not available in hours, please give data in DAYS.

| INVASIVE VENTILATION | No. | Total |
|--|---|-------|
| Number of invasive ventilator HOURS: (preferred option) | Elective Admissions Emergency Admissions | |

OR

| | | |
|---|---|--|
| Number of invasive ventilator DAYS: (if number of ventilator hours is not available) | Elective Admissions Emergency Admissions | |
|---|---|--|

NON-INVASIVE VENTILATION

| | No. | Total |
|--|---|-------|
| Number of non-invasive ventilator HOURS: (preferred option) | Elective Admissions Emergency Admissions | |

OR

| | | |
|---|---|--|
| Number of non-invasive ventilator DAYS: (if number of ventilator hours is not available) | Elective Admissions Emergency Admissions | |
|---|---|--|

BED UTILISATION/ MEDICAL STAFF DATA

11. Utilisation of ICU/HDU beds
Please give **FHOURS** of care. If data is not available in hours, please give data in **DAYS**. Exclude CCU bed hours/days.

| Number of Bed HOURS (preferred option) | No. | | Total |
|---|--------------------|---------------------|-------|
| | Elective Admission | Emergency Admission | |
| | | | |

OR

| Number of Bed DAYS (if number of bed hours is not available) | No. | | Total |
|---|--------------------|---------------------|-------|
| | Elective Admission | Emergency Admission | |
| | | | |

12. Senior Medical Staff Profile (Refer to Glossary)

| | Profile at 30/6/08 | |
|---|--------------------|-----|
| | No. Staff | FTE |
| Intensive Care Specialists | | |
| Salaried intensive care specialists on roster | | |
| Sessional intensive care specialists on roster | | |
| Non-Intensive Care Specialists | | |
| Salaried non-intensive care specialists on roster | | |
| Sessional non-intensive care specialists on roster | | |
| Vacant specialist FTE position(s) funded but unfilled | | |

13. Qualifications

a) Which qualifications does the ICU Director hold?
 JFICM FRCA Please state any other qualification _____
 FACEM MRCP
 FANZCA FRACP

b) Which qualifications does the ICU Deputy Director hold?
 JFICM FRCA Please state any other qualification _____
 FACEM MRCP
 FANZCA FRACP

14. ICU Registrar Staff Profile (Refer to glossary*)

| | Profile at 30/6/08 | |
|---|--------------------|-----|
| | No. staff | FTE |
| Registrars in formal Senior Registrar* position | | |
| Other registrars in JFICM training program | | |
| Other registrars not in JFICM training program | | |
| Total | | |

15. ICU Resident / House Officer / Career Medical Officer Staff Profile

| | Profile at 30/6/08 | |
|---|--------------------|-----|
| | No. staff | FTE |
| Dedicated ICU staff only – provides "emergency" ward services | | |
| ICU/ general hospital – provides non-emergency services outside ICU | | |

NURSING DATA

16. Nursing Profile (Refer to the glossary)

| | Profile at 30/6/08 |
|--|--------------------|
| | No. staff FTE |
| a) Permanent / rostered RN positions including clinical educators, unit manager, liaison, graduate students. | |
| b) Permanent / rostered EN positions | |
| c) ENs rostered to provide direct patient care | |
| d) No. of RNs that have taken maternity leave | |
| e) RN vacancies, i.e. funded but not filled on profile data. Include maternity / paternity, long service, secondments that have not been backfilled. | |
| f) EN vacancies | |
| g) RNs in graduate year (1 st year as RN) | |
| h) Permanently employed RNs with a critical care qualification. | |
| i) RNs working full time (full time ≥ 35 hours per week of paid employment). | |
| j) Post-registration critical care course students (completed a hospital course with credit towards a university award) | |
| k) No. of post-registration critical care course students who graduated with a university award during the 2007/2008 financial year | |
| l) Post-registration critical care course students who completed an in-house "introduction" program (no university credit) not including "orientation" etc. for relating RNs | |
| m) Permanently appointed Nurse Educators exclusive to ICU | |
| n) Liaison / Outreach RNs | |
| o) RNs that have resigned in 2007/2008 financial year | |

17. Destination of resigned RNs. Please state the number of resigned RNs (in 2007/2008 financial year) that apply to each option:

- Other permanent critical care position _____
- Other permanent nursing position _____
- Casual nursing work (including in this institution & externally) _____
- Non-nursing work _____
- Travel _____
- Parenting / family _____

18. For which shifts do you roster an ACCESS Nurse? Tick all that apply.

- AM PM Night Duty None Ad Hoc as required

For the 2007/2008 financial year, indicate the average hours per month:

- 19. Worked by casually employed RNs (include nurse bank/pool/agency) to cover roster shortfalls _____
- 20. Worked by permanent staff in excess of contracted hours, to cover roster shortfall _____
- 21. Worked by the Nurse Manager on direct patient care _____
- 22. Worked by an ACCESS Nurse _____
- 23. Worked by RNs exclusively allocated to medical emergency team (MET) / rapid response team (RRT) _____

MET/ OUTREACH

Medical Emergency Teams (MET)

- 24. Do you have a MET service, or rapid response team (RRT) at this site?
 No (Go to Q.27) Yes Fully funded...
 Partially funded... Fully funded...
- 25. If a MET / RRT commenced in 2007 or 2008, please give commencement date: _____
- 26. If a MET / RRT service is operational, what was the average number of calls per month in 2007 (calendar year)? _____

Outreach / Liaison Service

- 27. If there is an outreach/liaison service, is it funded?
 No (Go to Q.28) Yes Fully funded...
 Partially funded... Fully funded...
- What are the Outreach/Liaison current hours of service (e.g. 0800 – 1300)
- Monday
 Tuesday
 Wednesday
 Thursday
 Friday
 Saturday
 Sunday

CLINICAL INDICATORS

28. Did the ICU collect and submit Australian Council on Healthcare Standards (ACHS) clinical indicator data? 2007 2008 Did not submit

| | | |
|-----|--|--|
| 29. | Number of elective* surgical cases cancelled due to inadequate ICU resources (beds or staff) | |
| 30. | Number of appropriate non-elective patients referred to ICU but refused admission due to inadequate resources (beds or staff). Do not include the cancelled elective* admissions enumerated in Q 29. | |
| 31. | Number of discharges to a ward after 1800 hours and before 0600 hours. Exclude deaths, discharges from hospital and transfers to another hospital. | |

* Refer to glossary

32. Other additional clinical indicators collected:

- Central Line Associated Bacteraemia (CLAB) rate
- Ventilator-associated pneumonia rate
- Deep vein thrombosis (DVT) prophylaxis
- Methicillin Resistant Staphylococcus Aureus (MRSA) rate
- Pressure areas
- Medication errors
- Complications/Adverse events
- Medical Emergency Teams (MET)
- Nutrition indicators
- Australian Incident Monitoring System (AIMS)
- Other, please specify

33. Specify the percentage of staff currently:

Certified in ACLS Medical _____% Nursing _____%
 Completed ADAPT course Senior Medical _____% All Nursing _____%

34. Echocardiography

- a) Do your intensive care specialists perform echocardiography on intensive care patients?
 Yes No
- b) Do you have your own echocardiography machine?
 Yes No

CCR Survey 2007/08

9

SAFETY AND QUALITY

Safety and quality questions (2007/2008 financial year):

35. Allocated staff members for coordination of ICU quality activities?

| | No. Staff | FTE |
|------------------------|-----------|-----|
| Medical | | |
| Nursing | | |
| Other (please specify) | | |

36. Is there a regular performance review of all staff?

- Senior Medical: Yes No
 Medical: Yes No
 Senior Nursing: Yes No
 Nursing: Yes No
 Other: Yes No

37. Does the unit have competency standards for:

- i. Airway management Yes No
 ii. Central line insertion Yes No
 iii. Other (please specify) _____

38. Does the unit use process-oriented checklists for FAST HUG* (or variation)?

- Yes No

39. Does the unit have a policy of mandatory ultrasound guidance for localisation for central venous cannulation?

- Yes No
 Not applicable (no access to ultrasound machine)

40. Does the unit have rounds with an infectious disease specialist &/or microbiologist?

- Yes No
 If yes, do they have rounds at least weekly?
 Yes No

41. Does the unit have an ongoing antibiotic stewardship programme**?

- Yes No

** Refer to glossary

CCR Survey 2007/08

10

42. Does the unit regularly obtain antibiograms specific to ICU (rather than hospital-wide antibiograms)? Yes No

45. Does the ICU have a critical incident monitoring program? Yes No

46. Identify the main system issues in the ICU.

Please rank in order, with 1 = most important, 9 = least important

- _____ Lack of staff
- _____ Inability to admit patients
- _____ Exit block
- _____ Lack of beds
- _____ Implementation of MET
- _____ Inadequate funding for education
- _____ Inadequate funding for quality activities
- _____ Ineffective incident monitoring (ie incidents not notified)
- _____ Drug errors

47. Do you routinely replace central venous catheters (CVCs) after a specific length of time in situ? Yes No

48. Do you manage the arterial line as you would the CVC in suspected intravascular device related sepsis? Yes No

49. Does your unit impose maximum time limits on the use of intravenous administration sets (tubing) attached to central lines? Yes No

If yes, indicate by circling how often are they replaced?
 1-2 days 3-4 days 5-6 days 7 days other (list) _____

50. Following intravascular devices (in situ >24 hours), does your unit routinely culture:

- a) Peripheral arterial catheters Yes No
- b) CVCs Yes No

51. Approximately what proportion of CVCs inserted in your unit are: (total should add to 100%)

| CVCs: | Percentage |
|----------------------------------|---------------|
| Plain | |
| Chlorhexidine coated/impregnated | |
| Antibiotic coated/impregnated | |
| Other antimicrobial | |
| Total | = 100% |

52. The following refers to data entry & collectors in ICUs:

| | Profile at 30/6/08 | |
|--|--------------------|-----|
| | No. Staff | FTE |
| a) Data Collector(s) for APD / ANZPIC | | |
| b) Data Entry Person(nel) for APD / ANZPIC | | |
| c) What was the data collector(s) background? Tick all that apply. | | |
| <input type="checkbox"/> Intensivist/Consultant | | |
| <input type="checkbox"/> Registrar | | |
| <input type="checkbox"/> Resident | | |
| <input type="checkbox"/> Nurse | | |
| <input type="checkbox"/> Administrative | | |
| <input type="checkbox"/> Other (please specify) | | |
| d) What was the background of the data entry staff? Tick all that apply. | | |
| <input type="checkbox"/> Intensivist/Consultant | | |
| <input type="checkbox"/> Registrar | | |
| <input type="checkbox"/> Resident | | |
| <input type="checkbox"/> Nurse | | |
| <input type="checkbox"/> Administrative | | |
| <input type="checkbox"/> Other (please specify) | | |

53. This survey was completed by (tick all that applies):

- ICU Director
- Medical staff
- Nursing staff
- Administrative / Clerical staff
- Other (please specify)

Thank you for completing the survey.
